A funding formula myopia, the book argues, has left student engagement largely overlooked. It comes as no surprise, therefore, that vast funding enhancements have introduced disappointing outcomes results. The book argues the front of the classroom must become and remain the epicenter of reform activity: and that transforming instructional and engagement behaviors are effort-intensive endeavors that very little in pecuniary terms.

The Way of Saint James: Journey to America is the story about a family with origins in Spain and their journey to America, including the United States of America and Los Estados Unidos Mexicanos (the United Mexican States). The story focuses on the lives of two men, Mihail Gurevich and Baltazar de la Vega. Their families' background, history, and the lives they led in Europe under conditions that motivated both men to immigrate to America to seek a better life are told. Both men departed when they were young and overcame several obstacles with a resolve to achieve a life in which they could live in freedom and prosper with hard work and dedication toward family. Both individuals were products of not only their place of birth but also the societies in which they lived. Both left what could have been a life not confronted by danger and the unknown. Both chose to venture forth, accepting whatever challenges and risks life may present to them. Their

journeys occurred against the larger history of Europe in which they lived. Their journey is similar to the mystical El Camino de Santiago, the Way of Saint James, which served as a metaphor of their quest.

This book, in its first part, contains units of conceptual history of several topics of physics based on the research in physics education and research based articles with regard to several topics involved in teaching science in general and physics in particular. The second part of the book includes the framework used, the approach considering science knowledge as a special type of culture – discipline-culture. Within this approach, scientific knowledge is considered as comprised of a few inclusive fundamental theories each hierarchically structured in a triadic pattern: nucleus-body-periphery. While nucleus incorporates the basic principles and body comprises their implementations in the variety of laws, models, and experiments, periphery includes concepts at odds to the nucleus. This structure introduces knowledge in its conceptual variation thus converting disciplinary knowledge to cultural-disciplinary one. The approach draws on history and philosophy of science (HPS) necessary for meaningful learning of science. It is exemplified in several aspects regarding teaching physics, presenting history in classes, considering the special nature of science, and using artistic images in regular teaching. The revealed conceptual debate around the chosen topics clarifies the subject matter for school students and teachers encouraging construction of Cultural Content Knowledge. Often missed in teachers' preparation and common curriculum it helps genuine understanding of science thus providing remedy of students' misconceptions reported in educational research.

The current economic crisis with its gloomy implications for lost generations leaves many disadvantaged young people with ever-diminishing opportunities. The Youth Empowerment Partnership Programme (YEPP) is a fully evaluated on-going international programme focused on disadvantaged areas in eight European countries. It aims to empower young people and the communities in which they live by making them central to new decisionmaking processes involving partnerships between public, private and independent sectors. This book provides the theoretical context for the programme, gives a full account of the process and outcomes of over 10 years of joint effort in its unique development and research process and reflects on the lessons learnt for future policy. It will appeal to practitioners, researchers, policy-makers and decision-makers in foundations.

Although it has been more than 20 years since Communism crumbled in Central and Eastern Europe and the Soviet Union, many scholars and politicians still wonder what the lifting of the Iron Curtain has really meant for these former Communist countries. And, because these countries were largely closed off to the world for so long, there has yet to be an all-inclusive study on their administrative systems—until now. In *Public Administration in Post-Communist Countries: Former Soviet Union, Central and Eastern Europe, and Mongolia*, expert contributors supply a comprehensive overview and analysis of public administration in their respective post-Communist countries. They illustrate each country's transformation from an authoritarian system of governance into a modern, market-based, and in some cases, democratic government. The book covers the countries that were officially part of

the Soviet Union (Russia, Ukraine, Moldova, Estonia, Lithuania, Georgia, Kazakhstan, and Kyrgyzstan); those that were theoretically independent but were subject to Soviet-dominated Communist rule (Bulgaria, Hungary, Romania, and Poland); as well as a satellite republic that was under significant Soviet influence (Mongolia). Each chapter includes a brief introduction to the specific country, an overview of politics and administration, and discussions on key aspects of public management and administration—including human resource management, public budgeting, financial management, corruption, accountability, political and economic reform, civil society, and prospects for future development in the region. The book concludes by identifying common themes and trends and pinpointing similarities and differences to supply you with a broad comparative perspective.

"Writing History in the Digital Age began as a one-month experi-

ment in October 2010, featuring chapter-length essays by a wide array of scholars with the goal of rethinking traditional practices of researching, writing, and publishing, and the broader implications of digital technology for the historical profession. The essays and discussion topics were posted on a WordPress platform with a special plug-in that allowed readers to add paragraph-level comments in the margins, transforming the work into socially networked texts. This first installment drew an enthusiastic audience, over 50 comments on the texts, and over 1,000 unique visitors to the site from across the globe, with many who stayed on the site for a significant period of time to read the work. To facilitate this new volume, Jack Dougherty and Kristen Nawrotzki designed a born-digital, open-access platform to capture reader comments on drafts and shape the book as it developed. Following a period of open peer review and discussion, the finished product now presents 20 essays from a wide array of notable scholars, each examining (and then breaking apart and reexamining) how digital and emergent technologies have changed the ways that historians think, teach, author, and publish"--
